

3. Turn your power pack up to 12 volts minimum.
4. Let the RS-3 sound unit charge for 12 to 14 hours.

NOTE - While charging, you can lower the volume on the RS-3 Sound Unit to just below audible so as not to disturb others.

The RS-3 Sound Unit will operate from track power if the train is running at 12 volts or more. If the train is running at less than 12 volts, the sound system will run from battery power.

The battery power of this sound unit has a capacity of 45 minutes. If you run below 12 volts for longer than 45 minutes, the battery will eventually drain and operation will cease until you charge the unit again.

TO RUN YOUR RS-3 SOUND UNIT AT A LOWER VOLTAGE...

You can purchase an ART-29353 battery booster for \$9.95. This booster drops the minimum operating requirements to approximately 9 volts.

You may order a battery booster from Aristo-Craft by calling us at 201-332-8100.
